Volvo 240 B230 rear camshaft seal plate

FITTING INSTRUCTIONS

The camshaft seal plate is designed to fit exactly to the back of the head with the engine in the car.

Suitable for cylinder heads with castings ending in 530 & 531.

1. The rubber bung is recessed into the back of the head. Bend the tab in the camshaft seal plate in so that, when mounted, the tab applies a small amount of pressure to the rubber bung. This ensures that the bung cannot move.
2. Fit the camshaft seal plate using the fasteners provided.
3. The PCV system should be checked for blockages to ensure that any of the other major oil seals do not blow.
