VOLVO 240 ALUMINIUM CHECKERPLATE SUMP GUARD

FITTING INSTRUCTIONS

Our aluminium checker-plate replacement sumpguards bolt up in place of the original plastic belly pans that are prone to breaking or cracking after years of use on the roads.

Sumpguards are deliberately 'over-bent' during the folding process, which better allows us to accommodate cars which are now, in some cases, over 20 years old.

If you find that your sumpguard does not quite line up with the bolt holes, lie the sumpguard on a flat surface and stand on the bend to straighten it out a little. Repeat this in small increments and test fit.
